

RDC-7 Camera Utility

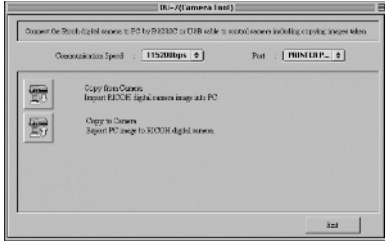

The RDC-7 Utility allows you to download, and upload, to and from your Camera and PC.

Connect the RDC-7 to the PC using the supplied USB or Serial cable.

Serial users must rotate the camera's mode dial to the "set" position, then push the "menu" button. From the on-screen-display, select "serial transfer". The camera's LCD monitor should flash "waiting".

Configuration dialog box.

Start the RDC-7 Camera Utility.

The configuration dialog box will appear.

Use the Port pull down to select the method you used to connect the camera. Modem port, printer port, or camera port (USB).

Now choose to either upload, or download images by selecting on the respective icon.

Downloading

The Download dialog box provides a number of options for you to select, identify and preview your images prior to downloading.

Enabling thumbnails shows you a preview of your images.

Cycle through your images.

You may specify the file number you wish to display.

Select the memory source of the images you wish to download

The album view lets you see your images and visually select the ones you want to download.

Add text to describe your images.

Use the "playback" button to check your videos or sounds before a download.

Uploading

The Upload dialog box allows you to locate files on your computer to transfer to the camera.

You upload only JPG, AVI and WAV files captured by the camera. Tif files are not allowed.

If you have a memory card in the camera, choose between it or the on-board memory.
